MY Yahoo! news.gator Bloglines

EXPWAY is bringing to market the third incarnation of its FastESG electronic service guide, FastESG V3, designed to help network and broadcast operators increase DVB-H revenues.

FastESG V3 is a full-platform solution for the design, management and delivery of ESG interactive and datacasting services compliant to the DVB-IPDC standard. It comes with an authoring tool allowing mobile network operators and broadcasters to edit their ESG, design interactive services and create datacasting services for broadcast with video content. After users perform these operations, the FastESG's MobileTV platform then takes care of aggregating and partitioning the service to allow multiple operators to broadcast their own ESG over the same network.

For more information, visit [www.expway.com](http://www.expway.com).
